

COOLANT MANAGEMENT SYSTEM

Save Time and Reduce Waste

K-Line® Industries, Inc has introduced a portable KL34000 Coolant Management System designed to quickly and cleanly drain, pressure test and refill the cooling systems on both trucks and tractors.

System Features:

- ★ Reduces the time required to drain/refill cooling systems.
- ★ Prevents unwanted mixing of coolant types.
- ★ Reduces spills and waste.
- ★ Easily moves between work stations and work sites.

Drain:

- ★ Regulated pressure using shop air forces coolant out of the entire system quickly into a sealed 20 gallon tank.

Pressure Test:

- ★ Closing a single valve allows for a pressure test to be performed, diagnosing the integrity of the system.

Vacuum:

- ★ The vacuum creates negative pressure throughout the cooling system drawing the coolant through the entire system from the bottom up, eliminating the possibility of air pockets.
